# YESHA PATEL

Jersey City, NJ | LinkedIn | GitHub | (551) 358-9212 | yesha.patel0710@gmail.com

## CERTIFICATIONS

CompTIA Security+

## EDUCATION

**Saint Peter's University** — **Jersey City, NJ**
**Master of Science in Cybersecurity — GPA: 3.7** — **Feb 2026**

- Relevant Coursework: Risk Assessment & Compliance, Digital Forensics, Ethical Hacking & Penetration Testing, Cryptography, Malware Analysis & Defense

**Sardar Patel University** — **Anand, Gujarat**
**Bachelor of Science in Information Technology — GPA: 3.8** — **Apr 2023**

- Relevant Coursework: Database Management, Operating Systems, Computer Networking, Object-Oriented Programming

## WORK EXPERIENCE

**IFUTURE** — **Anand, Gujarat**
**Security Engineer** — **Jun 2023 – Aug 2024**

- Administered user accounts and access permissions under enterprise authentication controls, applying least-privilege principles to reduce unauthorized access risk
- Monitored system logs and network activity across 20+ endpoints to detect anomalies, assess risk exposure, and maintain operational uptime
- Enforced endpoint security standards across desktop, laptop, and printer deployments, including antivirus configuration and hardening
- Ran a recurring security patch management process across multiple systems, reducing vulnerability exposure and supporting continuous compliance with internal security policy

## RELEVANT PROJECTS

**Improve 2.0 — Web Vulnerability Scanner (Python, FastAPI, React, Groq API)**

- Built a full-stack scanner assessing web applications against all 10 OWASP Top 10 categories, translating raw findings into a structured risk-and-remediation report
- Integrated an LLM API to auto-generate plain-language fix guidance for each finding, closing the gap between technical scan output and actionable remediation for non-technical stakeholders
- Applies Python for backend logic and JavaScript/CSS/React for the frontend, with hands-on vulnerability assessment across the OWASP Top 1

**SOC-Style Log Parser (Python )**

- Built a log analysis tool detecting brute-force and credential-stuffing patterns, modeled on Tier-1 SOC triage and control-monitoring workflows, with structured output for audit-ready documentation
- Structured output to support faster incident investigation and prioritization
- Used Python for log analysis and incident monitoring, with a built-in risk-assessment layer for prioritizing flagged events

**Async TCP Port Scanner (**Python) (asyncio)

- Built an asynchronous network scanner with MITRE ATT&CK T1046 technique mapping and JSON/CSV export for security reporting and risk-tracking workflows
- Exported findings to JSON/CSV for integration into broader security reporting workflows
- Used Python for asynchronous network traffic analysis, with lightweight endpoint-facing reconnaissance built in

## SKILLS

**Governance, Risk & Compliance:** Risk Assessment, Vulnerability Assessment, Security Policy Awareness, Compliance Monitoring, Control Documentation, Incident Monitoring, Security Monitoring, Alert Triage

**Security Tools:** Nmap, Wireshark, Burp Suite, Metasploit, Splunk(SIEM), OpenVAS, Nessus, Shodan, Autopsy, Volatility, Hashcat, ExifTool

**Systems & Platforms:** Windows, Linux, Active Directory / Enterprise Authentication, Endpoint Security

**Programming & Scripting:** Python, SQL, MySQL, Bash Scripting, JavaScript,Microsoft 365, CSS, React,

**Frameworks Referenced In Coursework/Projects:** OWASP Top 10, MITRE ATT&CK, ISO 27001, NIST

## LEADERSHIP & CAMPUS INVOLVEMENT

- 2nd place, college programming competition for developing an innovative application (2022)
- Participated in seminars, paper presentations, and debate competitions on IT and emerging technology (2022)
- Active participant in CTF competitions (picoCTF, OverTheWire), hackathons, and online security communities
